

PART I DICTATION

What is a dream for

One theory is that we dream to release the deep, secret desires. We do not express these desires in real life because of the rules of polite society. Another theory is that dreams allow us to solve problems that we can't solve in real life. We go to sleep with a problem and wake up with the solution. This may be a way to use our dreams rather than a purpose of dreaming. If you believe that your dreams are important then analyzing them may help you to focus on the problem and help you to find the solution.

The modern image is that dreams are the brain's way of cleaning up the computer's hard disk. Dreams organize the events of the day into folders and delete what is not needed. But we all know that very little of what we dream is concerned with what happened to us that day.

PART VI WRITING

SECTION A

The advantages of being careful with money in daily life

Nowadays, there is a hot debate on whether people, including students should be careful with their money in their daily life since they try their best to save money. Some people think it is not good to do so because this may not make people smart consumers. But in my eyes, the advantages of being careful with money in daily life outweigh the disadvantages.

First, being careful with money is a virtue that can always benefit people. Being thrifty is of great help, especially when the economic status around the world is not very good and it becomes harder to earn money than before. A good habit of being careful with money will help many people go through this difficult period or any other difficult financial situation in their life. People with this awareness will think carefully before deciding to buy anything. For students, this awareness is also of great help since they mainly depend on their parents for financial supports. When they keep this awareness in their mind, they will definitely avoid wasting money.

Secondly, being careful with money is, in fact, a good way of practicing how to manage one's money. In current society, it is necessary to learn something about finance. But theories are usually hard to learn. In contrast, most people can learn quickly by practicing. Being careful with money means an efficient use of money, which, in essence, equals to part of the job of a financial planner. Being careful with money can teach people to make best use of their money.

It is true that being too careful with money may have some disadvantages; for example, it may cause people to ignore other aspects of commodities. But overall this behavior is good and has its reality basis. Money-consciousness is always needed in the market-oriented economy.

SECTION B

April 20

Dear Mathew,

I'm writing to show my apology for being unable to wait for you in my dorm. I'm really sorry but I have something urgent to do. You can come to Room 1003, No. 3 Teaching Building to find me. The map on the back of the note will help you. I'll wait for you there.

Yours,

Tom
